Career Objective

Software Developer with expertise in backend systems (Spring Boot, PostgreSQL) and AI/ML solutions (NLP, Agentic AI) passionate about solving real-world problems and seeking roles in AI/ML Engineering or Backend Development.

Education

Pranveer Singh Institute of Technology, Kanpur B.Tech in Computer Science and Engineering (Artificial Intelligence) Percentage: 81.29% (up to 5th Semester)	2023 – Present
The Chintels School, Kanpur ISC (Class XII) – 80%	2023
The Chintels School, Kanpur ICSE (Class X) – 90.66%	2021

Technical Skills

Programming Languages: Java, Python, HTML, CSS
Software Development: Object-Oriented Programming, REST APIs, Backend Development, API Integration, Authentication, Distributed Systems
Frameworks & Libraries: Spring Boot, JWT Authentication, Scikit-learn, PyTorch, Hugging Face Transformers, OpenCV
Databases: SQL, PostgreSQL
DevOps & Tools: Docker, Git, GitHub, VS Code, Cursor, Postman
AI/ML Domains: Natural Language Processing (NLP), Machine Learning, Neural Networks, Agentic AI, RAG
Relevant Coursework: Data Structures & Algorithms, DBMS, OOPs, Design & Analysis of Algorithms

Projects

CyberTwin <i>Java, Spring Boot, PostgreSQL, Docker, JWT, REST APIs, AI Agents</i>	GitHub Mar 2026 – Present
- Developing a scalable backend system using Spring Boot and PostgreSQL for processing and managing large-scale cybersecurity logs and workflows - Architecting multi-agent AI workflows to simulate cyber attack-defense scenarios with automated threat detection and real-time response mechanisms - Implemented secure JWT-based authentication, RESTful APIs, and Docker-based containerization for deployment-ready microservices - Collaborating on system design, debugging, API testing, and backend feature development following clean and maintainable coding practices	
AI-Based Fake News Detection System <i>Python, PyTorch, BERT, Scikit-learn, TF-IDF, REST APIs</i>	GitHub Sept 2025 – Nov 2025
- Built a fake news detection platform using fine-tuned BERT, achieving 98.4% validation accuracy on large-scale news datasets with efficient text classification performance - Developed NLP pipelines for data preprocessing, tokenization, feature engineering, model training, evaluation, and real-time prediction workflows using TF-IDF and machine learning techniques - Integrated Google Fact Check API and NewsAPI for real-time claim verification, confidence-based prediction analysis	
ANPR – Automatic Number Plate Recognition <i>Python, CNN, BiLSTM, OpenCV, Flask</i>	GitHub Aug 2024 – Nov 2024
- Developed an ANPR system for license plate detection and character recognition using CNN and BiLSTM - Implemented image preprocessing and segmentation using OpenCV for improved detection accuracy - Deployed the recognition pipeline as a Flask microservice for real-time inference	

Certifications

- Machine Learning Specialization** – Coursera (Stanford University)
- Data Structures & Algorithms** – Udemy (Abdul Bari)
- Data Base Management System** – NPTEL, IIT KHARAGPUR

Achievements

- Solved **450+** Data Structures & Algorithms problems on LeetCode
- Ranked **10th** in a college-level hackathon among 100+ participants
